

Information note for families

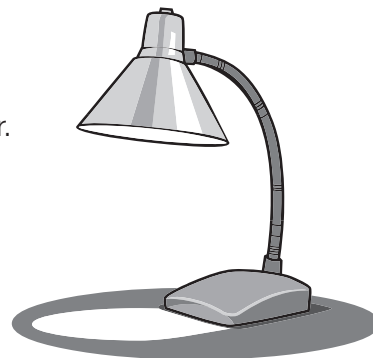

Name: _____ Date: _____

Introducing the 'Looking for light' task

This term, our class will be exploring light as part of the *Light fantastic* unit. Students are encouraged to find as many sources of light as they can both inside and outside their house. They will also record what the light is used for.

Some examples of light sources and their use might include:

- refrigerator light – to help see inside the fridge
- aquarium light – to see the fish and to help the plants grow.

Students may present their findings in any form they choose. Ideas might include:

- complete the resource sheet 'Looking for light'
- make a chart or booklet of drawings of the light sources and include labels and descriptions of what the light is used for
- take photos of the light sources and include labels and descriptions of what the light is used for.

Students will be asked to share their observations with the class on _____.
