

If you catch COVID-19, your risk of death is

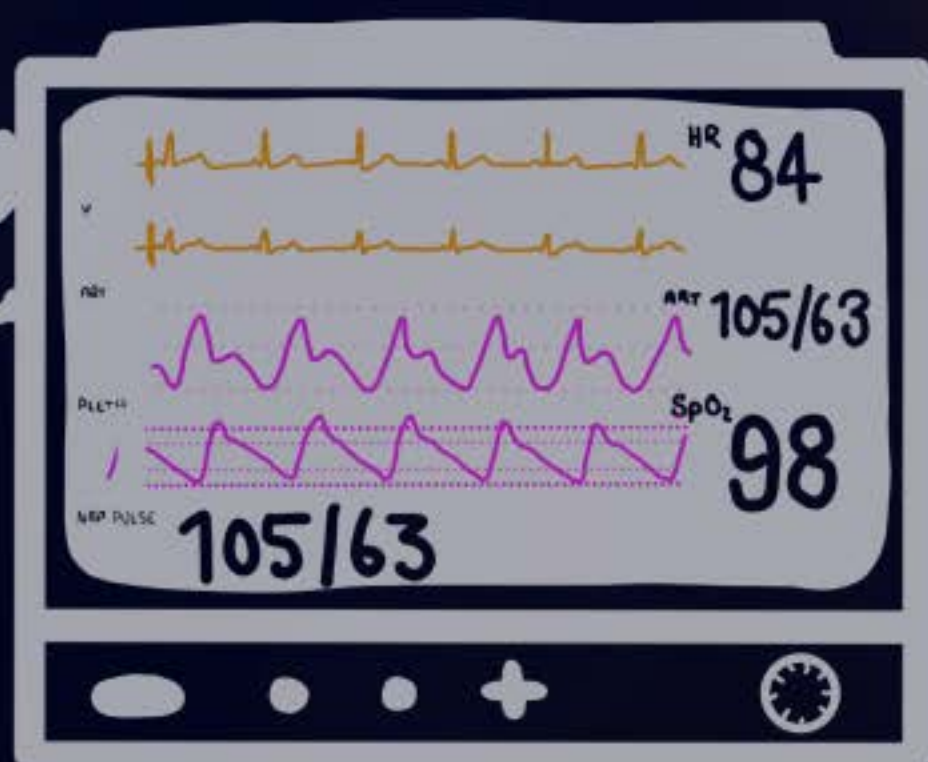

42,000 in a million.

If you get the AstraZeneca vaccine,
your risk of death is **1 in a million.**

COVID-19 is **dangerous** but the worst symptoms
can be avoided with vaccination.

If you catch COVID-19 your risk of ICU hospitalisation is
127,000 in a million.

If you get the
AstraZeneca vaccine,
your risk of ICU
hospitalisation is
4 in a million.

COVID-19 is **dangerous** but the worst symptoms
can be avoided with vaccination.

The risk of being hit by lightning is

2 in a million.

If you get the AstraZeneca vaccine,
your risk of death is **1 in a million.**

You're more likely to be hit by lightning than die
from the AstraZeneca vaccine ...

and you're **really not likely** to get hit by lightning!

The risk of death from your daily dose of aspirin is
100 in a million.

If you get the **AstraZeneca vaccine**, your risk of death is
1 in a million.

Just like with your aspirin treatment,
the proven **benefits outweigh the risks.**

The risk of dying
from a general
anaesthetic is

**18 in a
million.**

If you get the AstraZeneca vaccine,
your risk of death is **1 in a million.**

In both cases, the proven **benefits**
outweigh the extremely **rare risks.**

The risk of dying
while giving birth is

67 in a million.

If you get the
AstraZeneca vaccine,
your risk of death is
1 in a million.

The benefits for both the parents and baby
outweigh the **extremely rare risks.**

The risk of dying from
accidental poisoning is
55 in a million.

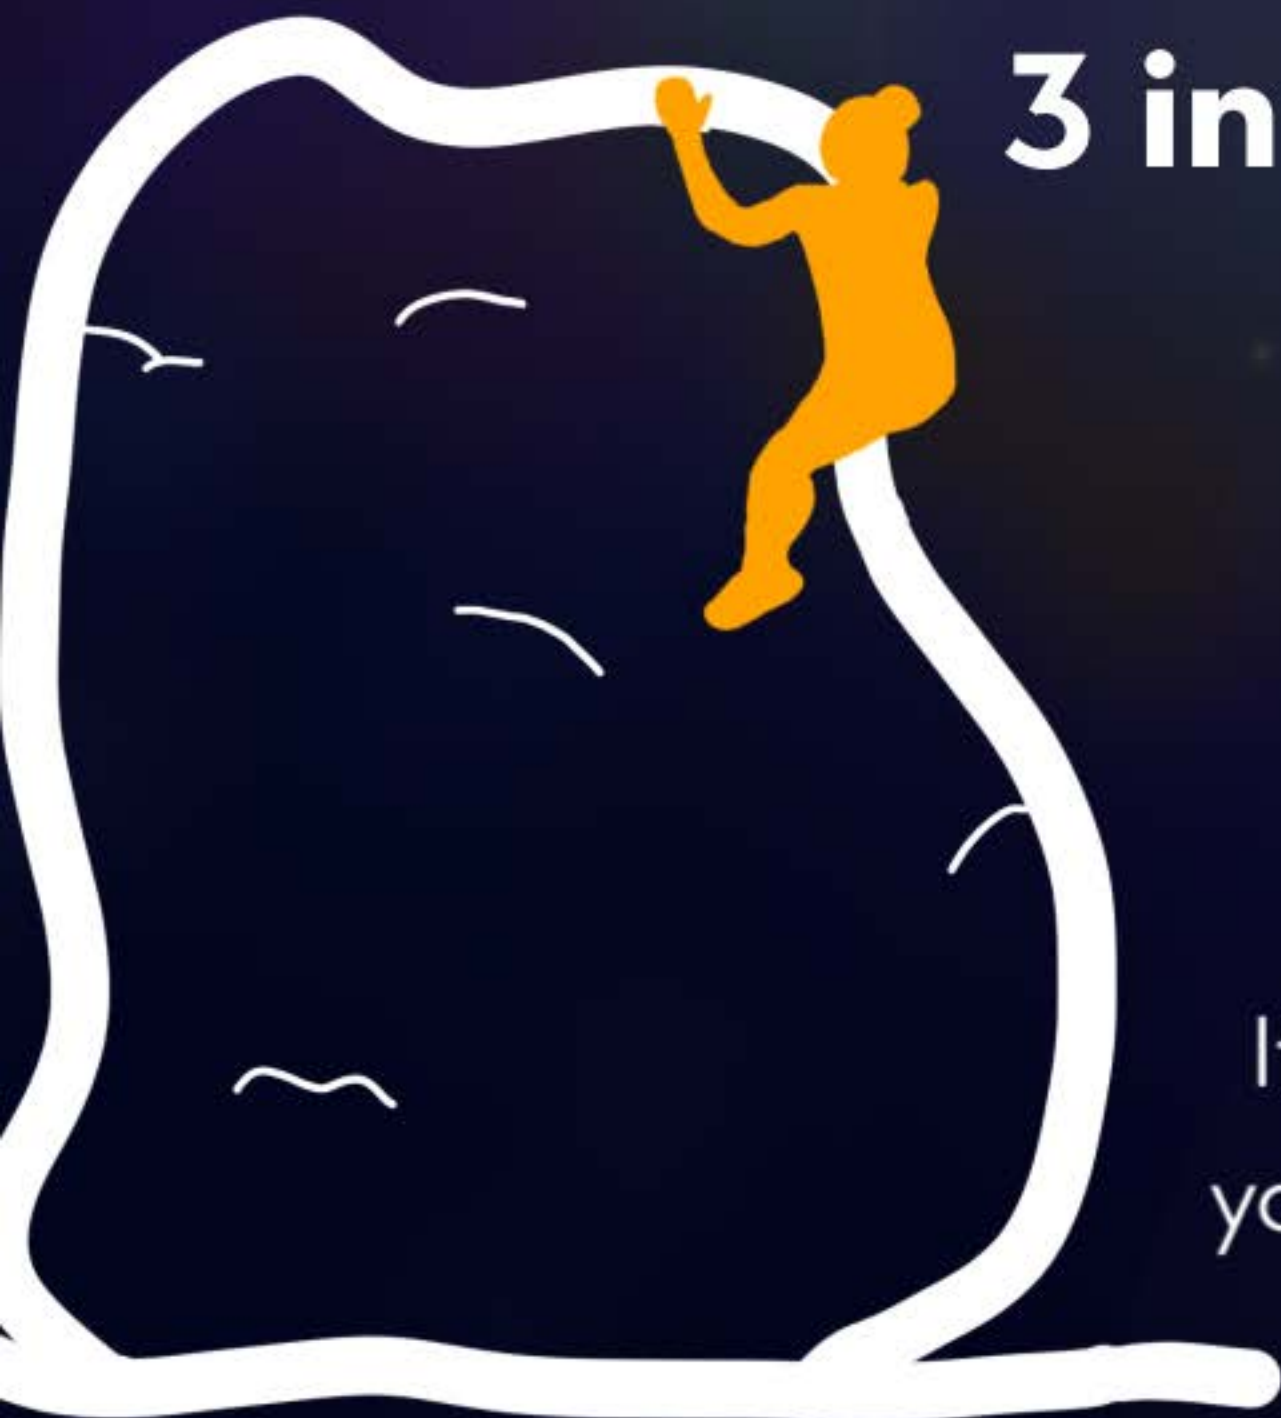

If you get the AstraZeneca vaccine,
your risk of death is
1 in a million.

You're more likely to die from **accidental poisoning** than from COVID-19 vaccination.

The risk of dying from rock climbing is

3 in a million.

If you get the AstraZeneca vaccine,
your risk of death is **1 in a million.**

You put yourself at **greater risk** rock climbing
than you do getting vaccinated.
